MEMORANDUM FOR: THE RECORD

SUBJECT : Trip Report - [REDACTED] B-144A1. Time and Place of Meeting: The meeting was held 14 June 1956
at the [REDACTED] 50X12. Attendance: [REDACTED] 50X13. Discussion:a. Carrier Current System 50X1

A working prototype of this system was turned over to [REDACTED] for use as a model during the pilot production run. [REDACTED] feels that the twenty units can be completed by December of this year and possibly sooner if security approvals on design personnel are not delayed beyond the normal 90 day period.

50X1

During the next two weeks [REDACTED] intends to measure all critical design parameters for use as a guide in the units they are to build. Upon completion of the measurement phase a conference will be held wherein design parameter values will be discussed and finally set.

50X1
b. Receivers

A short discussion was held concerning TSS surveillance receiver requirements and the possible application of [REDACTED] 20-100 MC receiver to the solution thereof. It is the feeling of the undersigned that a good capability exists for meeting TSS requirements in the subject company. Accordingly, it is planned to query USA Signal Corps on the results of their service tests, and if satisfactory, to work out a potential long range receiver development plan capable of fulfilling Agency requirements in this field over the next three years. APD Panel approval will be requested in a separate memorandum.
